## W. C. DOYLE, HOXIE, ARK., WRITES:

I like Peppard's Funk "G" Hybrid because its yield is greater than the common corn. I think there is 10 bushels to acre more yield from Peppard's Funk "G" Hybrid. I like it because it stands the drought better and the storms better also.

## GREGORY BROTHERS, CASH, ARK., WRITE:

Reference to the results we had with your Peppard's Funk "G" Hybrid Corn—They were very satisfactory. We bought 30 bushels of it and plan to plant it again next season.

## JOHN WALKER, FT. SMITH, ARK., WRITES:

We had no rain at the proper time after this corn was planted. Did not have any rain to speak of but Peppard's Funk "G" Hybrid made the best corn by far. I recommend Peppard's Funk "G" Hybrid.

## J. J. LITTLE, CONWAY, ARK., WRITES:

We planted this year approx. 25 bushels of Peppard's Funk "G" Hybrid seed corn. We are well satisfied with the yield from this seed and we expect to plant a much larger acreage in Peppard's Funk "G" Hybrid next year.

## WALTER HILL, FORREST CITY, ARK., WRITES:

I think Funk's Hybrid corn is the best corn for late planting I ever saw. Next year I am going to plant all my late planting in Peppard's Funk "G" Hybrid.

W. C. MARTIN, EUDORA, ARK., WRITES:  
I think the Peppard's Funk "G" Hybrid is the best Hybrid for this black loam soil. It is early and is a drought resisting corn and is at least twenty days earlier than all other Hybrid corn I have grown. I had two acre plot planted which I harvested 60 bushels or 30 bushels to acre. This open pollinated—10 acre plot of Peppard's Funk "G" Hybrid harvested 48 3/4 bushels to acre.
